

Double materiality analysis: activities carried out

METHODOLOGY

*The stakeholders were employees, suppliers, tenants and civil society organizations/communities.

Identification of preliminary Sustainability issues

Topics were identified for FUNO's prescribers that can have a significant impact on their sector, operations and stakeholders.

The most relevant initiatives, trends, methodologies, frameworks and standards on Sustainability issues at the general and particular level of the sector were considered.

Reports and recommendations from industry bodies were reviewed, assessing their impact and relevance to FUNO before being included in the preliminary list of Sustainability issues.

SASB and GRI: international organizations that create standards and methodologies for the dissemination of economic, environmental and social information.

S&P Corporate Sustainability Assessment: questionnaire focused on monitoring the ESG performance of companies by industry for the decision-making of investors and key audiences.

MSCI: Provider of environmental, social and governance indices designed to help institutional investors more effectively benchmark ESG investment performance.

TCFD: international organization that aims to create standards on climate change mainly in matters of corporate governance, metrics and objectives, strategy and risk management.

GRESB: organization that provides Real Estate investors with information about ESG issues in this sector.

Identification of preliminary Sustainability issues

Frameworks and reference publications were also considered.

- The double-materiality concept Application and Issues – GRI.
- EU Guidelines on non-financial Reporting directive.
- Corporate Sustainability Reporting Directive (CSRD).
- Double Materiality Guidelines – EFRAG.
- The Two Dimensions of ESG Materiality – S&P.
- Sustainability-related risks and opportunities and the disclosure of material information – IFRS Sustainability.
- Statement of Intent to Work Together Towards Comprehensive Corporate Reporting – CDP, CDSB, GRI, IIRC y SASB.
- Exploring materiality – SASB.

The issues of FUNO's prior materiality were considered.

Dual Materiality Calibration

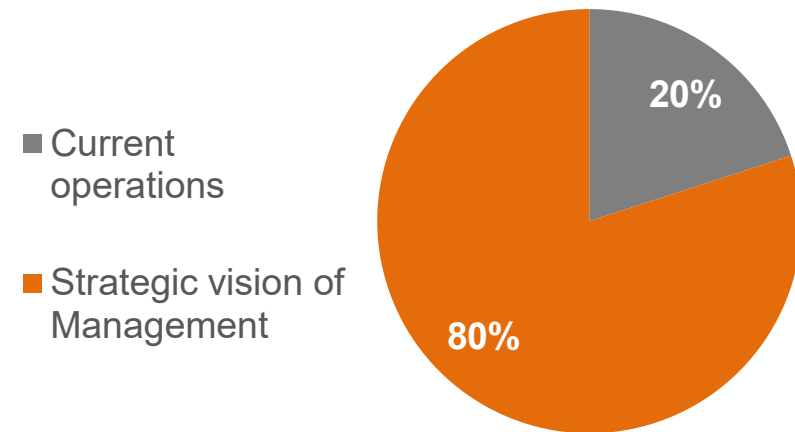

In collaboration with FUNO's Sustainability team, the weights assigned to the groups were calibrated of interest that participated in each axis.

Impact Axis

Prior to the weightings by stakeholder group for the impact axis, a value is given to initiatives, trends, methodologies, frameworks and standards related to ESG aspects, with SASB being the one classified with the highest value.

Financial Axis

leaders with experience in different areas participated from their strategic perspective.

The specific weightings assigned took into account both the representativeness of each group for FUNO, and its influence on the organization.

Topic Prioritization

Critical

These issues are of utmost importance to the organization and its environment. Its impact is profound and direct, with the potential to significantly impact stakeholders, business viability, reputation, and have a significant financial impact. These are aspects that require immediate attention and concrete actions for their management and mitigation.

Significant

Although not as urgent as critical issues, these issues have a considerable impact on the company and its stakeholders. Its management and approach can generate significant benefits or risks in the long term. They require constant attention and action plans to manage them effectively.

Important

These are relevant issues for the organization and its environment, but their impact is not as immediate or critical as the first two levels. Although they may not pose an imminent threat, their proactive management is necessary to prevent them from becoming bigger problems in the future.

Informative

These issues are relevant, but they do not have a direct impact on the organization's strategy, operations, or reputation. They are relevant to certain stakeholders or may be related to emerging trends, but they are not critical or significant in the current context.

Minimal

These are issues of less relevance to the organization and stakeholders. Although they could be considered, their impact is minimal compared to other aspects of the operation and its environment. They don't require immediate attention or specific actions, but it's important to keep them in consideration to understand the big picture.

03

Results

Double materiality at FUNO

The matrix shows the relationship that different topics have according to their importance to FUNO from a financial and impact perspective. The material topics are classified into: **Environmental**, **Social** and **Governance**.

Full list of issues and their

Id	Dimensión	Tema
1	Climate change	Identification and management of risks and opportunities associated with weather events that impact real estate assets, as well as the implementation of strategies to improve the resilience of properties.
2	Energy efficiency	Efficient and responsible use of energy within processes and developments, to reduce consumption and GHG emissions, as well as the promotion of the use of renewable energy sources.
3	Ecosystem regeneration	Responsible management of land use, biodiversity conservation, and the implementation of practices that minimize the impact on the local environment. Like this how to generate a balance between real estate development and the preservation of ecosystems.
4	Water management	Efficient use and conservation of water resources throughout the operation and on the properties, to ensure their availability and quality.
5	Waste management	Development and execution of strategies for efficient waste management, focused on reducing waste generation, maximizing recycling and responsible disposal of waste generated in operations and properties.
6	Sustainable infrastructure	Design, construction, and operation of environmentally responsible and resource-efficient properties, as well as the creation of spaces that improve the quality of life and foster a productive environment in the community.
7	Social investment	A set of actions by the company aimed at bringing benefits to the community in which it operates, through community development initiatives, volunteerism and donations to charities.
8	Human capital	Capabilities, knowledge, and skills of a company's employees and their ability to attract and retain top talent.
